

WHY DO PETS NEED REGULAR **Wellness Visits?**

They give us the big picture of your pet's health. We examine your pet from nose to tail – eyes, ears, mouth, skin, heart, lungs, abdomen, and much more.

Pets hide signs of illness and pain. We can often detect conditions long before symptoms are noticeable.

We can establish a baseline of health. Routine bloodwork gives us baseline values that can be used for comparison as your pet ages. This helps us catch problems in early stages.

Together, we'll develop a preventative care plan. With vaccinations, parasite prevention, and diet recommendations, we can keep your pet healthy.

Your pet may be overweight. Just a few extra pounds can increase your pet's risk of diabetes, high blood pressure, heart disease and more.

Together, we'll develop a preventative care plan.

Your pet may have

dental disease. 70% of cats and 80% of dogs suffer from some form of dental disease by age 3. We perform an oral exam at each visit.

We can build a stronger relationship. The better we get to know you and your pets, the better care we can provide!

Routine wellness visits can save you money in the long run. Catching illness early usually means treatment is easier and less costly.

**Let's make 2022 a healthy, happy year
for your furry friends!**
